Intelligent Central Locking for the Home

**High security wirefree technology  
that fits existing doors & windows**

[www.centrallock.com](http://www.centrallock.com)

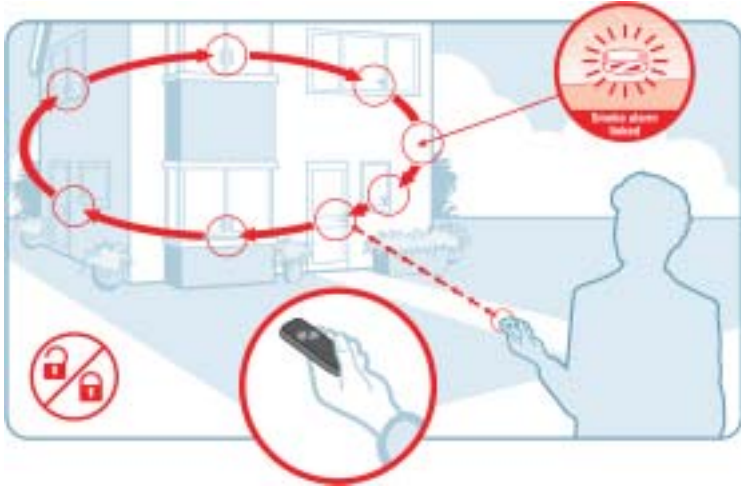

**One lift of the handle can lock all your doors and windows informing you if they are not correctly secured.**

The fully maintained system is wireless, easy to fit and provides active protection of property and lives.

One press of the keyfob allows you to open your doors or windows.

In addition Centrallock can link other devices such as smoke detectors. When activated the locks automatically release from INSIDE ONLY, allowing safe and quick evacuation of a property even with the youngest Children.

Centrallock brings keyless central locking to your home and features automatic frequency control and the unique Cedardell loop network.

**Benefits to Your Later Years**

- Unlock your doors from the comfort of your armchair
- Dial in to check the status of the home
- Easy to open & lock, no more keys to contend with
- A lift of the handle confirms status of the whole house

**Benefits to Life with Children**

- Keyless exit in event of a fire
- Childproof thumb turn to prevent unauthorised exit
- Doors can be opened with your arms full

**Benefits to the Upwardly Mobile**

- State of the art in home security
- Designer key fobs replace traditional cut keys
- Access via mobile phone for remote opening
- One touch locking for that busy schedule

**Other Major Advantages**

- Lost or stolen key fobs can be easily disabled eliminating the need for lock replacement
- Units can be unlocked without the need to walk or be near to the door, particularly useful for the elderly or the infirm
- No external lock reduces the risk of forced entry
- Visual and audible signals if units are not fully secured

2.

3.

4.

5.

6.

**1. Master Door Unit**

You must have one master unit. This controls communication with all the other units in the system, verifies requests to open or close and instructs units to do so if authorised. It will also tell you if units are not secured or if any units have low battery power.

**2. Key Fob**

You must have at least one key fob. The key fob is used to unlock doors and windows. The unit is sealed for life.

**3. Smoke Detector**

You must have at least one smoke detector. When activated by fire the master unit will unlock all doors and windows from the inside only. This allows keyless escape in an emergency but prevents entry from outside, so not compromising security.

**4. Secondary Door & Window Unit**

The secondary unit is used on the back door and is unlocked using the door button on the key fob. A window unit is used in the same way but is unlocked using the window button on the key fob.

**5. Window Unit**

The windows consists of the unit, as shown on the left and a set of 2 internal 9mm ø stainless steel high security shootbolts.

**6. Dialer Unit**

This unit is used to open your doors using a mobile phone or a land line. It requires no fixed telephone line and security is via a unique digital pin number.

*The minimum system requirement is 1 master unit, 1 key fob and 1 smoke detector. Larger systems can be made up of other elements to a maximum of 8 key fobs and 17 other units\* (Please contact us if you require a larger system.)*
